Use a torch and carefully examine the door seal. It may have a small hole which is hard to see at first. If door seal is ok remove top of machine and check inlet valve. Turn power off and with your hand examine the inlet water valve.

If it feels damp on the solenoid then it leaks from there and finds its way around to the front of the machine through the frame work. This leak happens due to too much water pressure at your laundry taps. If so install a pressure reducing valve before the water inlet hose and replace the water inlet valve in the machine as it is now faulty. 0417362396 Melbourne metro area Regards Sam The first one is the original manual you requested and the second link refers to the quick reference guide. Mikor eléri a kapcsolón beállított hofokot, az első érintkező nyit és megszakítja a fútoszal áramát. Kérdésem, hogy mi lehet a kapcsolóban. Hogyan, miképpen szabályozza a beállított teljesítményt.
