They are not replacements for your Cannondale Bicycle Owner's Manual. Be sure to obtain and read all of them. Improper mechanical work increases the risk of an accident. Any bicycle accident has risk of serious injury, paralysis or death. To minimize risk we strongly recommend that owners always have mechanical work done by an authorized Cannondale retailer. Composite materials Condition 3 symbol shown in Figure 2. NOT jumping. All mountain bikes without rear suspension are Condition 3, and so are some lightweight rear suspension models. There are no large "sick drop" or drop offs, jumps or launches wooden

structures, dirt embankments requiring long suspension travel or heavy duty components. Crosscountry and marathon equipment tires, shocks, frames, drive trains are lightweight, favoring nimble speed over brute force. Suspension travel is relatively short since the bike is intended to move quickly on the ground and not spend time in the air landing hard, and hammering through things. Consult your Cannondale Dealer about how you intend to use your bike. In selecting lightweight components, you are making a tradeoff, favoring the higher performance that comes with less weight over longevity. If you choose more lightweight components, you must inspect them more frequently. If you are a heavier rider or have a rough, abusive or "go for it" riding style, buy heavy duty components. Place your bike in a stand by extending the seat post and positioning the stand clamp on the extended seat post.

Don't extend beyond the MINIMUM INSERT line marked on the seat post. The carbon fiber composites making up the frame are held together by some extremely strong bonding chemicals. However, these bonds can be attacked or weakened by paint stripping or refinishing chemicals. You can be severely injured, paralyzed or killed. If this happens, you can lose control of your bike and you can be thrown off, a moving tire can be stopped because it touches the fork or frame. Also, be sure to follow the manufacturer's recommendations of your front fork and rear shocks. Allowing for lateral rim flex and a wheel or rim that is out of true will likely mean choosing a rear tire that provides even more clearance than the CPSC recommends. You must observe the measurement when installing headset parts, headset adapters, installing and adjusting a fork, and selecting replacement forks. In this manual, the number is also listed in the specifications section. Do not measure from the bottom of headset bearing cups or head tube adapters.
